## Introduction to Spring 5, Spring MVC and Spring REST

**Duration:** 35 hours

**Price:** \$900

**Prerequisites:** Java SE programming experience and an understanding of object-oriented design principles. Fundamental knowledge of XML is helpful but not required. The course **Java Programming** or equivalent knowledge provides a solid foundation.

**Description:** Spring 5 provides an evolutionary advance of Spring's powerful capabilities. This course introduces those capabilities, as well as providing guidelines on when and how to use them. It includes coverage of the three main configuration styles: Java-based (`@Configuration`), annotation-based (`@Component`), and the traditional XML-based configuration that may still play an important role in existing and new projects.

The course starts with in-depth coverage of Spring's Core module to reduce coupling and increase the flexibility, ease of maintenance, and testing of your applications. It goes on to cover many of the most important capabilities of Spring, including easing configuration with Spring Boot, integrating Hibernate and JPA persistence layers with Spring and Spring Data, and using Spring's declarative transaction capabilities.

The course includes integration of Spring with Java EE Web applications, a solid introduction to Spring MVC, and coverage of building RESTful resources with Spring MVC. It also provides an overview of Spring's reactive programming model for repositories and Web resources.

This course is hands on with labs to reinforce all the important concepts. It will enable you to build working Spring applications and give you an understanding of the important concepts and technology in a short timeframe.

The course does all labs with the Eclipse IDE and the lab instructions include detailed directions for setting up and using it.

# Course Overview

## Introduction to Spring

- Overview of Spring Technology
  - Motivation for Spring, Spring Architecture
  - The Spring Framework
- Spring Introduction
  - Declaring and Managing Beans
  - ApplicationContexts: The Spring Container
  - XML and @Component/@Named Config
- Dependencies and Dependency Injection (DI)
  - Examining Dependencies
  - Dependency Inversion
  - Dependency Injection (DI)
  - DI in Spring: XML and @Autowired

## Spring Boot Overview

- Maven and Spring
- Spring Boot Structure
- Spring POMs with Boot Parents
- Spring Boot Starters

## Configuration in Depth

- Java Based Configuration (@Configuration)
  - Overview of @Configuration and @Bean
  - Dependency Injection
  - Resolving Dependencies
- Integrating Configuration Types
  - XML and @Component Pros/Cons
  - @Configuration Pros/Cons
  - Choosing a Configuration Style
  - Integrating with @Import and <import>
- Bean Scope and Lifecycle
  - Singleton, Prototype and Other Scopes
  - Configuring Scope
  - Bean Lifecycle and Callbacks
- Externalizing Properties
  - Properties Files
  - @PropertySource property-placeholder
  - Using @Value
  - SpEL
- Profiles
  - Overview and Configuration
  - Activating Profiles

## Spring Testing

- Testing and JUnit Overview
  - Writing Tests: Test Classes, Asserts, Naming Conventions
  - Running Tests: IDE, Maven, ...
  - Test Fixtures: Setup and Teardown
- Spring TestContext Framework
  - Overview
  - Configuration

## Spring and Spring Data with Hibernate/JPA

- Overview of Spring Database Support
- Configuring a DataSource
- Using Spring with Hibernate
  - High Level Hibernate Overview
  - SessionFactory Configuration and LocalSessionFactoryBean
  - Contextual Sessions and Spring Integration
- Using Spring with JPA
  - Managing the EntityManager (EM)
  - LocalContainerEntityManagerFactoryBean and Container-managed EMs
  - JEE and JNDI Lookup of the EM
  - Configuration and Vendor Adaptors
  - Creating a JPA Repository/DAO Bean:  
`@PersistenceUnit,`  
`@PersistenceContext`
- Spring Data Introduction
  - Overview and Architecture
  - Configuring Spring Data
  - Repositories and JPA Repositories
  - Using CrudRepository
- Spring Data Querying
  - Naming Conventions for Querying
  - Creating more Complex Queries
  - Query Configuration

## Spring Web Integration and Introduction to Spring MVC

- Java EE Web App Integration
- ContextLoaderListener and WebApplicationContext
- Web MVC Overview
- Spring MVC Basics
  - Configuration and the DispatcherServlet
  - `@Controller, @RequestMapping`

## Spring Transaction (TX) Management

- Overview
- Declarative TX Management (REQUIRED, etc.)
- TX Scope and Propagation
- Pointcut-Based Configuration of Transactions

## Additional Spring MVC Capabilities

- `@ModelAttribute` and Reference Data
- Forms and Binding, Spring Form Tags
- Sessions and `@SessionAttributes`
- Validation / JSR-303

(Handlers)

- `@RequestParam` and Parameter Binding
- View Resolvers
- Controller Details: `@RequestParam` and `@PathVariable`
- Model Data and `@ModelAttribute`

## RESTful Services with Spring

- REST Overview, URI Templates
- REST and Spring MVC
  - Spring Support for REST
  - `@RequestMapping/@PathVariable`, `@RequestBody` and `@ResponseBody`
  - URI Templates and `@PathVariable`
  - Controllers with `@RestController`
- Generating JSON
  - JSON Overview
  - JSON Representations for Resources
  - Message Converters
- Generating XML
  - JAXB and Jackson Message Converters for XML
  - JAXB / `@XmlElement`
- Content Negotiation

## Common REST Patterns

- GET: Read
- POST: Create
- PUT: Update
- DELETE: Delete
- Programming on server side and client side (with `RestTemplate`)

## XML Specific Configuration

- Collections: Lists, Sets, etc.
- Additional Capabilities
  - Factory Classes and Factory Methods

## Java Clients for RESTful Services

- Client Requirements and Spring's `RestTemplate`
- `getForObject()` and `getForEntity()`
- Other `RestTemplate` Methods
- Accessing Headers / `exchange()`

## What's New in Spring 5

- Updates to Spring Core
- WebFlux
- Reactive Web Framework

- Definition Inheritance (Parent Beans)
  - AutoWiring with XML
  - Inner Beans and Compound Names
-
